More convenience in indirect immunofluorescence through colour-coded conjugates

- **Each conjugate class has its own colour**
- **The colours of the tube lids match the colours of the conjugates**

Advantage: you know immediately that the conjugate on the reaction field...

... has been applied cleanly

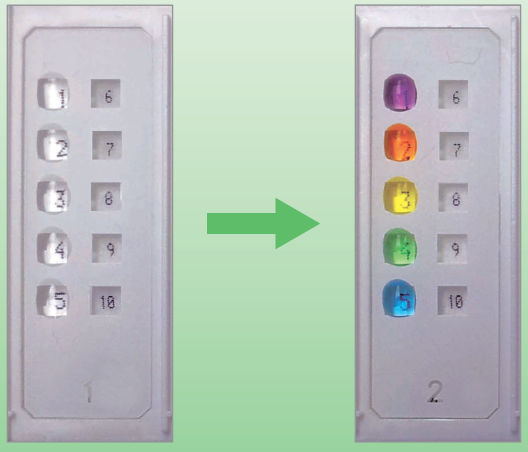
... has been correctly selected for the required analysis

... has sufficient contact with the substrate

Conjugate	Colour	
	Reagent	Lid
IgA		
IgG*		
IgM		
IgAGM		
IgAG		

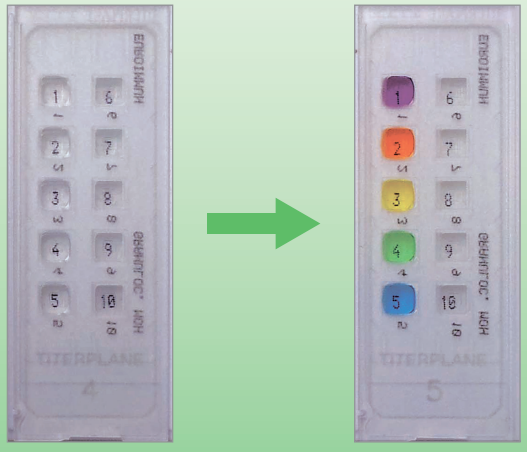
*The lid for primate-absorbed IgG (avidity tests) is labelled with an additional red dot:

Previously **New**



Pipetted test fields are assessed at a glance

Previously **New**



Conjugate-substrate contact is observed directly

Conjugates with Evans Blue and for EUROPattern remain unchanged.
